Subject: Update on MD commercial sterilizers and more

Just to let you know:

- Trinity Sterile has submitted annual usage of EtO and MDE has confirmed those numbers. It's looking like OAQPS will be able to reduce their estimated risk. We may be able to knock them off the high risk facility list.
- Elite Spice (2 facilities, one in Jessup, one in Hanover) has provided additional clarification and will be providing parameters in about 2 weeks, to establish their flowrates in their warehouses that could also reduce their fugitive emissions. If they can substantiate this, it may also allow for their 2 facilities to come off the list. We will wait and see.

B.Braun, Allentown, PA:

- Requested a meeting to find out more about how OAQPS did their estimates and modeling. I have set up a technical call later this morning with OAQPS with them.
